

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph [0046] with the following amended paragraph:

The more detailed view of the computer program product 1 according to the invention for analyzing traffic signals as shown in FIG. 4 comprises a computer program product 3+5 comprising a generic module 30 and a buffer module 31. Generic module 30 receives information from user module 9 and sends information to buffer module 31, which receives information from ~~packet~~ traffic receiver 7, which receives traffic signals to be analyzed from integrated-circuit-environment 8. Buffer module 31 further transmits information to a pre-process module 10, for example, forming part of user module 9.
